

luxcore

with power edge

Our Luxcore spring units are made locally in Willowbrook, Illinois, with American 100% recycled steel wire.

28% COOLER & 26% MORE DURABLE THAN FOAM

Luxcore springs sleep up to **28% cooler** than foam does to increase airflow and are **up to 26% more durable** than foam cores.

Luxcore with Power Edge

A **superior sleeping edge** compared to a foam encasement; by The Beloit Mattress Company, a **factory-direct** mattress co.

Power Edge reduces that roll-off feeling and provides a consistent sleep surface.

The Luxcore Power Edge helps a mattress sleep cooler with better edge ventilation.

Luxcore spring units are designed for maximum pressure relief and support.

The encased coils that form the units interior provide an even, contouring surface that absorbs partner movement & prevents them from rolling together.

Luxcore provides more support than a foam core and **better ease of movement** on the bed for increased energy return.

Luxcore spring units are ideal for platform beds, foundations, and adjustable beds.

Our 6" Luxcore provides maximum comfort in a low-profile design for use in applications with a low height, such as antique beds and RVs, is preferred.

The **6" Luxcore with Power Edge** features 2.11 mm wire on the outside, two rows of coils, and 1.83 mm wire in the center coils.

SIZE	HEIGHT	COILS
TWIN	6"	528
TWIN XL	6"	560
FULL	6"	759
QUEEN	6"	875
KING	6"	1120
